

# SECURITY COMPUTER PROJECT

SECURE MEDICAL SYSTEM

ALESSANDRO SPINOSI

GUILLAUME KERCKHOFS

SAMAIN CLÉMENT

RANDI DOCHOT

ALIX DECLERCK

ABSTRACT. The goal of this project is to implement a secure client / server system handling patient's medical records, such as the ones available in hospitals.

## CONTENTS

1. Project description .....	2
2. Check-list .....	2
2.1. Confidentiality .....	2
2.2. Integrity .....	2
2.3. Non repudiation .....	2
2.4. Strong authentication scheme .....	2
2.5. Relying secrecy .....	2
2.6. Injection vulnerability .....	2
2.7. Remanence attack vulnerability .....	2
2.8. Replay attack vulnerability .....	2
2.9. Fraudulent request forgery vulnerability .....	2
2.10. Monitoring .....	2
2.11. Component security knowledge .....	3
2.12. System .....	3
2.13. Access control .....	3
2.14. General security features .....	3
References .....	3

## 1. PROJECT DESCRIPTION

## 2. CHECK-LIST

### 2.1. CONFIDENTIALITY

Do I properly ensure confidentiality?

- Are sensitive data transmitted and stored securely?
- Are sensitive requests sent to the server transmitted securely?
- Do I achieve end-to-end encryption (if relevant)?
- Does a system administrator have access to the sensible data of some arbitrary user?

### 2.2. INTEGRITY

Do I properly ensure integrity of stored data?

### 2.3. NON REPUDIATION

Do I properly ensure non-repudiation?

- Do I use signature, certificates, a proper authority?

### 2.4. STRONG AUTHENTICATION SCHEME

Do I use a proper and strong authentication scheme?

- Do I follow OWASP guidelines?
- Is my authentication broken (cf. OWASP 10) [1]

### 2.5. RELYING SECRECY

Do my security features rely on secrecy, beyond credentials?

### 2.6. INJECTION VULNERABILITY

Am I vulnerable to injection?

- URL, SQL, Javascript and dedicated parser injections

### 2.7. REMANENCE ATTACK VULNERABILITY

Am I vulnerable to data remanence attacks?

### 2.8. REPLAY ATTACK VULNERABILITY

Am I vulnerable to replay attacks?

### 2.9. FRAUDULENT REQUEST FORGERY VULNERABILITY

Am I vulnerable to fraudulent request forgery?

### 2.10. MONITORING

Am I monitoring enough user activity so that I can immediately detect malicious or analyse an attack a posteriori?

- Do I simply reject invalid entries, or do I analyse them?
- Can logs be falsified?

## 2.11. COMPONENT SECURITY KNOWLEDGE

Am I using components with known vulnerabilities?

## 2.12. SYSTEM

Is my system updated?

## 2.13. ACCESS CONTROL

Is my access control broken (cf. OWASP 10) [1]? Do I use indirect references to resource or functions?

## 2.14. GENERAL SECURITY FEATURES

Are my general security features misconfigured (cf. OWASP 10) [1]? Also, note that you will unlikely graduate should you fail to

- use a (at least self-signed) certificate for your server,
- use a framework (at least for the server's side),
- achieve end-to-end encryption (if relevant).
